Introduction

Abstract

Methodology

The Education Level of Australian Residents

In the past few decades, Australia has acquired many skilled migrants, contributing substantially towards the local economy. Hawthorne (2010) states that by 2007, two thirds of them were former international students recruited in Australia rather than offshore applicants. This transition has also been named as the “two-step-migration” by Hawthorne (2010).

This section will analyse the education levels of current residents of Australia.

The dataset provides information on the education levels of Australian residents and their duration of stay within the country.

The residents of Australia have been categorized based on their duration of stay within the country as

- native born
- less than 5 years
- between 5 - 10 years
- more than 10 years
- unknown

The level of education has been categorized using a broad three-category classification as

- low
- medium
- high
- unknown

Figure 1: Breakdown of Australian residents based on their level of Education and duration of stay in Australia

five-to-ten-years	female	high	247776
five-years-or-less	female	high	304851
more-than-ten-years	female	high	709303
native-born	female	high	1988476
unknown	female	high	57974
five-to-ten-years	male	high	225403
five-years-or-less	male	high	253977
more-than-ten-years	male	high	629162
native-born	male	high	1411509
unknown	male	high	40176
five-to-ten-years	female	low	44916
five-years-or-less	female	low	58018
more-than-ten-years	female	low	452605
native-born	female	low	1456792
unknown	female	low	75480
five-to-ten-years	male	low	37858
five-years-or-less	male	low	55720
more-than-ten-years	male	low	309193
native-born	male	low	1197395
unknown	male	low	57786
